EXTRUSION

We use blown film technology in our extrusion machines. We produce 3 layers coextruded LDPE, MDPE and HDPE films with high quality and with low thickness tolerances. We can produce films up to 2640 mm width. Depending on the packaging requirements of your products, different polyethylene raw materials are blended with a recipe of specific formulation.

GRAPHIC & REPRODUCTION

By our experienced designers and most up to date software solutions AKM creates and prepares designs to be able to print top quality packages that goes beyond the limits in flexo printing.

CLICHE PRODUCTION

AKM provides an advantage to its customers by producing the printing cliches at its premises. Since the very beginning of the introduction of this technology we are using the High Definition Kodak NX cliche production with the ArtWork software to reach a high resolution and better dot structures. In the end we come up with fine printing results that goes beyond expectations.

PRINTING

We carry out high quality printing up to 10 colors by using HD NX cliche through our high-tech 4 printing German and Italian machines with max 1450 mm printing width and max. 1250 mm repeat length . We are able to visualize and inspect the printed film automatically when the machine is running with 100% fulfillment.

LAMINATION

Lamination process is applied for the purpose of providing more protection to the product to be packaged, to add better physical properties to the package and to add visual activity to the packaging. We can laminate duplex, triplex or quadroplex structures up to 1500mm in width using solvent based or solventless methods.

SLITTING and BAG MAKING

This is the latest stage in packaging in which the package is delivered in the desired sizes such as rolls or bags (with handle/without handle/baby diapers with cross or paramount handle, hygienic pads bags, round bottom poultry bags, tissue bags, patch handle bags, doypack bags, three side sealed bags, zipper bags, pet food bags etc.)

PRODUCT DEVELOPMENT

AKM Research and Development Team works with its customers to enable them to develop their existing products and to produce new products which shall add value to their commercial activities.

These Research opportunities provided by the experienced AKM team and multinational hightech suppliers support the AKM customers who plan to introduce new products into the market or who would like to develop or update packaging for an existing product.

AKM team aims to provide packaging solutions which shall increase the sales performance of the customer products and bring them one step ahead.

RECYCLING

Our aim is to bring scrap plastic material into re-usable structure. Our capacity of recycling scrap plastics is around 500tons per month and the recycling process is fed by both in house waste and outsourced wastes.

QUALITY CERTIFICATES

HYGIENIC PRODUCTS

We are producing the hygienic products with approved raw materials which comply with human health and with Coex PE structures in accordance to our client's quality and performance expectations. We are providing the best printing with sustainability feature and with ultimate printing technology in "visual quality"; with fully undersanting of our clients' machine lines, we provide the fastest, high efficient and less waste production way in concept of "process success". For continous needs and expectations we keep working with our R&D team to have fastest response to the sectors.

- BABY DIAPER BAG
- FEMCARE BAG
- DETERGENT
- SOAP
- WET WIPES
- INCONTINENCE BAG

FOOD PRODUCTS

In food packaging, accordance with required product conditions addition to our procurement of films with PP and PE structures, we are also providing packaging solutions which are developed to add features of high-barrier, anti-fog, humidity resistance to the products with PET, BOPA, ALU in order to be protective under such speacial conditions. We are able to apply these features with double layers and triplex layers in options of rolls and bags.

- SHRINK FILM
- BAKERY
- DRIED FOOD
- SUGAR & SALT
- FROZEN FOODS
